3 Users and roles

4 Data model & architecture

5 Application lifecycle

6 Validation & automation

7 Reports, dashboards & security

8 Testing, status & conclusion

The problem and our objectives

Problem today

- Eligibility checked by hand, often wrong
- Missed deadlines and duplicate applications
- Shortlist decisions not recorded
- No usable placement statistics

Our objectives

- Normalised data model with six forms
- Automatic validation and notifications
- Role-based dashboards and 11 reports
- AI keywords and sentiment on feedback
- Secure, governed deployment

Existing vs proposed system

Area	Existing (manual)	Placement Tracker
Eligibility	Checked by hand	**Checked on submit**
Decisions	By message, unrecorded	**Logged with user and time**
Student updates	Staff send messages	**Automatic emails**
Reports	Compiled manually	**11 reports + dashboards**
Data	Scattered files	**One controlled application**

Who uses it: four roles

1

Administrator

Manages students, companies and drives; sees all reports

2

Placement Officer

Shortlists, rejects or selects; records interview feedback

3

Faculty Coordinator

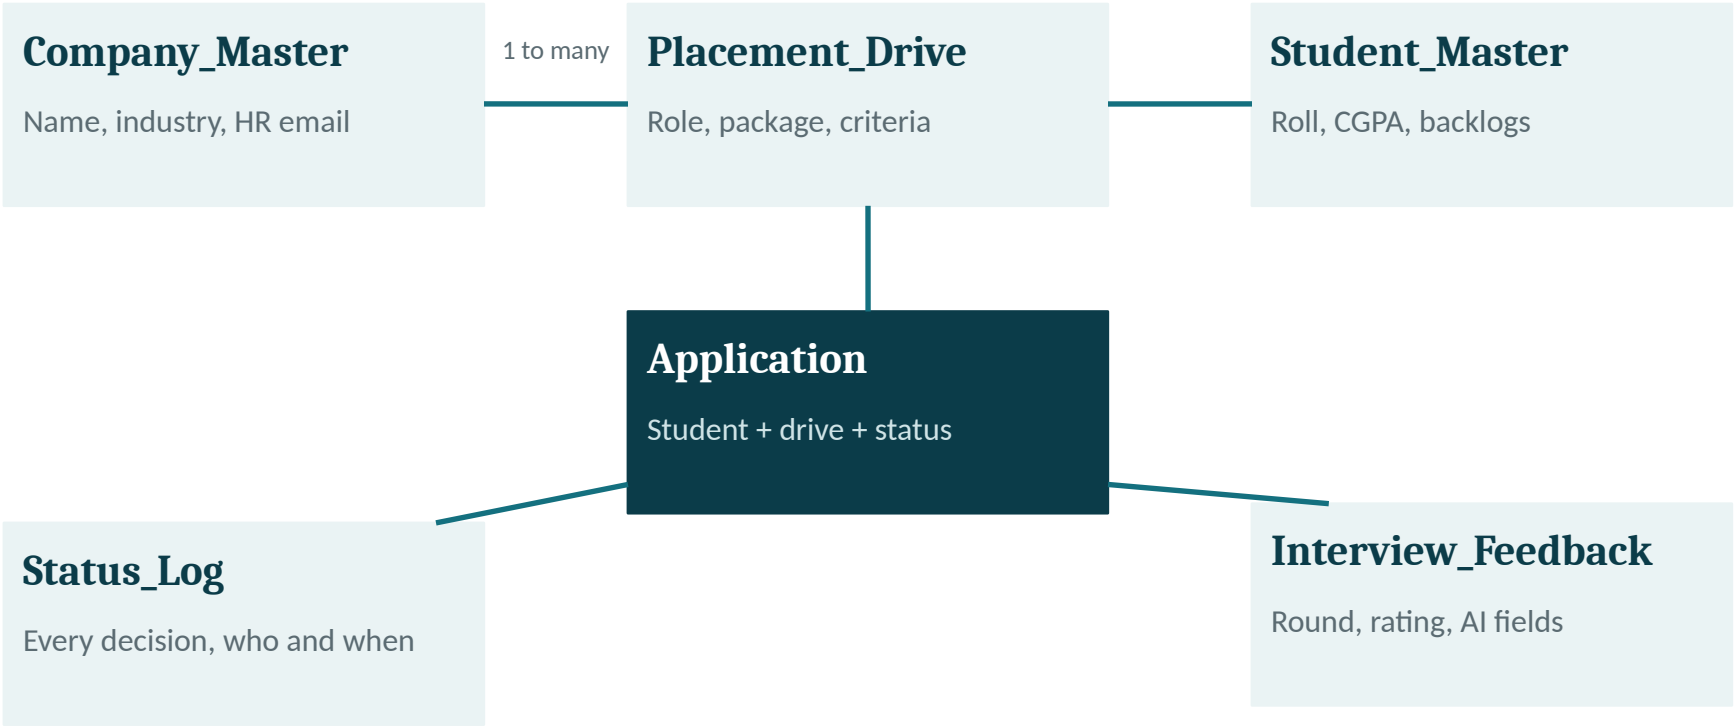

Views department-wise placement reports

4

Student

Views open drives, applies, tracks and withdraws

Data model: six connected forms

Application lifecycle

Other outcomes

- Rejected by the officer
- Withdrawn by the student

On every decision

- Status_Log row is written
- Student gets one email

Eligibility validation before saving

- √ Drive is Open
- √ Last date not passed
- √ CGPA meets the minimum
- √ Backlogs within the limit
- √ Department is eligible
- √ No duplicate application

Also validated

- Unique roll number and email
- CGPA between 0 and 10
- Unique company name
- One feedback per round

Automation with Deluge and workflows

6	11	3	14	15
Forms	Reports	Dashboards	Workflows & actions	Deluge scripts

Form events

Validate, load and user-input scripts

Record actions

Shortlist, reject, select, withdraw

Notifications

Email on apply, decision and reminder

Reports and dashboards

Reports (11)

- 7 list reports with filters
- Kanban board by status
- Drive calendar
- 2 analytics charts: placements and feedback sentiment

Dashboards (3)

- Placement: counters and status chart
- Student: open drives and own applications
- Coordinator: department-wise figures

Roles, access and security

Component	Admin	Officer	Coord.	Student
Student_Master	Full	View	View	—
Placement_Drive	Full	Add/Edit	View	View
Application	Full	Edit	View	Add/View
Interview_Feedback	Full	Add	View	—
Status_Log	View	View	View	—

Controls

- Record filters
- Locked finals
- Audit log

Testing and deployment status

Done

- Design of 6 forms, 11 reports, 3 pages
- 15 Deluge scripts written
- 18 test cases defined

Next

- Run test cases in the live app
- Log defects and fixes
- User acceptance feedback

Later

- Measure performance
- Publish to production
- Add screenshots and URL

Conclusion and future work

What we built

- One app replacing spreadsheets and messages
- Automatic eligibility checks
- Logged decisions and email updates
- Role-based access

Next steps

- Notify all eligible students on a new drive
- Multi-round tracking
- Resume parsing with AI
- College single sign-on
